MADRIX At Prolight + Sound 2023 — Product Previews**MADRIX 5.6 – Pixel-Mapping At Its Best**

The MADRIX Team is excited to unveil the upcoming MADRIX 5.6 update for its cutting-edge LED-lighting control software at this year's Prolight + Sound. The main highlights include Global Colors, 2 new languages, Autosave, and many more improvements to enhance the creative process.

Global Colors are a powerful new feature enabling central management of colors. You can easily create, manage, and apply your favorite colors across your entire project or even multiple projects to speed up your workflow. Applying a consistent color scheme is now easier and faster than ever. Any changes made to Global Colors instantly update your referenced visuals. Most importantly, Global Colors give you the ability to quickly change visuals after having them created. Whether you're a seasoned professional or just starting out, Global Colors makes working with colors a breeze.

In addition, the new update will add two new user-interface languages, Indonesian and Korean, to better serve its global user base. The software already supports several international languages for convenient operation. Furthermore, users can also look forward to a wide range of workflow boosts. Official support for the Akai Professional APC mini mk2 allows operators to seamlessly integrate the MIDI controller with the software. And with the much-requested Autosave feature, users no longer have to worry about losing their work unexpectedly and allowing them to focus on the creative side.

MADRIX 5.6 provides users with the tools they need to make LED-lighting control easier and more effective. The new version will be a free update for MADRIX 5 and available for download on the MADRIX website, www.madrix.com, when it releases.

MADRIX NEBULA – Leap In Features

MADRIX NEBULA has established itself as a top choice for professionals in the industry. Made in Germany with a 5-year warranty and one of the most extensive lists of supported digital LEDs, the pixel controller makes it straightforward to create stunning lighting installations.

Firmware version 6.00 is set to be released soon after Prolight + Sound. This new update is a huge leap forward, increasing the available output universes from 8 to 12. Users can now control and synchronize even more lighting fixtures and LED strips, which makes the device even more versatile and powerful. This can also help to reduce the number of units needed for a single project, making it more cost-effective and convenient. With this significant improvement, MADRIX NEBULA will become an even more indispensable tool for pixel-mapping projects of all sizes.

**Prolight + Sound 2023**

The MADRIX Team is excited to showcase these updates at Prolight + Sound 2023 and invites all attendees to visit their booth B34 in Hall 12.1 to experience the latest innovations in lighting control and pixel controllers.
